

Thank you for your interest in Iron World Fencing and Gates!

Now that you are ready to place your order, please read through the following guidelines to ensure accurate completion of your Iron World Build Sheet. First, be sure to select the correct form based on the type of material you will be purchasing.

All Build Sheets must be completed by customer, signed, dated and returned to Iron World prior to the start of production on materials.

First, select your Maverick fence style from the list of options. Next to the style chosen, fill in the quantity, picket size, number of rails, height, width and color.

Directly below the fence section you will find your Post options. Select the correct square post size and write in the desired length (i.e. 2" x 9'). Beneath your selected post size, you may fill in quantities for blanks, lines, ends and corners. To the right, please select flat or ball caps.

The third section is for Swing Gates: First, fill in the dimensions-- please provide overall height and opening measurements along with Hardware size. *Iron World will make the necessary deductions for the hardware and build the gate to fit this opening.* If you want gate leaves to be "Exact" measurements you must indicate on build form, "Build Gate to Exact Measurement"-- No deductions will be taken out. Next, be sure to indicate single or double, and manual or operated. For gates with Arches, your overall height will be the height from the lowest point. Our standard arch is 1'3" and arch types include: Estate, Moon, Reverse Estate and Reverse Moon. Standard gate hardware includes a Fulcrum latch or ILD, and wrap around hinges. If different hardware is required, this must be noted.

The bottom left side of the page contains a section for Extra Hardware. Iron World's fence panels and gates include hardware; this section is strictly for extras.

If you are ordering from Iron World's Golden Gate Series Sliding Gates: Select Ornamental or Chain Link Slide Gate Build Sheet. Fill in the height and opening size; the dimensions are exact based on the opening measurement. Iron World has standard counter balance measurements, which can be found in the specs. If your gate requires Barbed Wire, this must be noted and will add 1' to the overall height. Sliding gates are equipped with 4" hardware; please indicated round or square. Standard gates built on single track up to 30', Dual track 31' and up unless otherwise specified. Contact Iron World for information regarding Box Frame Gates and Dual Posts.

Finally, go back through your build sheet thoroughly to ensure all necessary information is provided and correct—**this is exactly the way your materials will be built.** Make any needed corrections, sign and turn in to Iron World to place order.

If you are unsure of anything regarding the ordering of your materials using our Maverick and Golden Gate Series Build Sheets, your Regional Iron World Representative is a phone call away and happy to help with the ordering process. Call us at (866) 310-2747
