

MAVERICK - S (Solid) Ornamental Panels

The Maverick-I (Industrial) Solid Line is made with $\frac{3}{4}$ inch solid hot dipped galvanized steel pickets that are then riveted to an 11 gauge channel. Our pickets are hot dipped to provide a protective coating against moisture and rust. This coating is more protective in nature vs. the traditional decorative coating seen on other iron products. Industrial Aircraft Rivets are used to attach each individual picket to the rail allowing the section to rack to your job specifications. These rivets provide the strength of a welded product without the rusting that accompanies them. Individual pickets can be replaced if damage should occur for any reason. The following styles are available in Maverick-S:

Aberdeen

Georgetown

Canterbury
